Professional Summary

Full-Stack Software Developer with 1.5+ years of professional experience building enterprise-grade web, mobile, and cloud-native applications. Proven expertise in React, Next.js, React Native, and TypeScript for frontend development, and C#, .NET, Azure Functions for backend systems. Proficient in Python for backend scripting, data processing, machine learning, and AI agent development — including proof-of-concept analytics pipelines and GenAI integrations. Strong track record in developing Warehouse Management Systems (WMS), integrating RESTful APIs, Azure cloud services, and implementing CI/CD pipelines. Committed to continuous improvement across the full technology stack, with an emphasis on stakeholder communication, cost optimization, and delivering scalable, maintainable, user-centric solutions.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React, React Hooks, React Native, Next.js, Tailwind CSS, Redux Toolkit, RTK Query

Backend: C#, .NET 8.0, Node.js, Express.js, FastAPI, Entity Framework Core, RESTful APIs, SOAP/WCF, Swagger, Postman

Database: SQL Server, MySQL, Entity Framework Core, Stored Procedures, Query Optimization

Cloud & DevOps: Microsoft Azure (Functions, App Services, Application Insights, Azure AD/Entra ID), Azure DevOps, Jenkins CI/CD, Git, Docker

Architecture: Microservices, REST API Design, Multi-tenancy, Repository Pattern, Dependency Injection, OAuth 2.0/JWT Authentication

Other: Power BI, Tableau, Python, OpenAI APIs, LangChain, TensorFlow, Vector Databases (Pinecone, ChromaDB), Data Structures & Algorithms, Agile/Scrum, Jira, Code Reviews

Education

Master of Applied Computing — University of Windsor, Windsor, ON | Jan 2024 – Apr 2025

Bachelor of Engineering — University of Mumbai, Mumbai, India | Jul 2019 – May 2023

Professional Experience

Software Developer | SunsetGrown – Mastronardi | Kingsville, ON | May 2025 – Present

Frontend Development & Mobile Applications

- Developed and maintained enterprise Warehouse Management System (WMS) using React, Next.js, and TypeScript, supporting multi-location distribution centers with real-time inventory tracking and order fulfilment dashboards
- Built cross-platform React Native mobile application for warehouse floor operations
- Integrated Zebra industrial barcode scanners and camera-based scanning functionality, modernizing legacy manual data entry workflows and reducing operation time by 60%
- Implemented progressive form wizards and step-by-step workflows across multi screens using Redux Toolkit for complex state management

Backend Development & Cloud Architecture

- Architected and developed multi-tenant REST API using Azure Functions (.NET 8.0) serving multiple warehouse locations with schema-based data isolation and dynamic tenant resolution
- Built 13+ Azure Function endpoints handling operations and comprehensive reporting with Entity Framework Core 8.0
- Implemented Azure AD OAuth 2.0 authentication with JWT token validation, JWKS-based signature verification, and token lifecycle management for secure API access; ensuring regulatory compliance with enterprise security standards
- Designed enterprise integration microservice using SOAP/WCF for Microsoft Dynamics NAV/Business Central with NTLM authentication, handling inventory synchronization and pick ticket retrieval

- Developed fault-tolerant scheduler with exponential backoff retry strategies, Semaphore Slim concurrency control, and state tracking; contributing to risk management by minimizing data loss during system failures
- Created comprehensive reporting engine with multiple report types including master-child-grandchild hierarchical data structures, advanced filtering, and pagination
- Built health monitoring system with Windows API integration for disk space analysis, SQL connectivity validation, and three-tier health status reporting (Healthy/Warning/Critical)
- Integrated Application Insights for telemetry, performance monitoring, custom metrics tracking, and exception handling with correlation ID tracing across distributed systems

Full-Stack Integration, DevOps & Continuous Improvement

- Integrated RESTful APIs with React and React Native frontend applications for real-time data synchronization, ensuring seamless communication between mobile, web, and backend services
- Deployed applications via Azure DevOps CI/CD pipelines across Dev, QA, and Production environments; participated in Operational Readiness Reviews and gating sign-offs prior to each production release
- Performed comprehensive API testing using Swagger and Postman, conducted code reviews, and participated in Agile sprints with ticket triaging and sprint planning; maintained clear stakeholder communication throughout delivery cycles
- Optimized performance with 12-hour memory caching for schema mappings, lazy-load patterns, and query optimization — reducing API response times by 50% and identifying cost optimization opportunities in Azure resource usage
- Created real-time analytics dashboard with KPI widgets tracking count accuracy percentage, average velocity metrics, top performer identification, and historical trend analysis
- Actively contributed to knowledge transfer within the team through documentation, code reviews, and mentoring peers on Azure Functions architecture and React Native patterns

AI Agent Developer (Freelance) | Canada, ON |

- Built and deployed AI agents using OpenAI APIs and LangChain for automation and customer support with FastAPI backend integration; leveraged vector databases (ChromaDB) for semantic search and retrieval-augmented generation (RAG) proof-of-concept pipelines
- Integrated n8n workflow automation platform for real-time data processing, analytics orchestration, and modular backend workflows
- Designed fallback logic, performance monitoring dashboards, and scalable deployment pipelines for production-ready AI systems; defined user stories and acceptance criteria to align AI agent behaviour with client requirements

Projects

SparkLink – Academic Collaboration Platform | University of Windsor | Jan 2024 – Apr 2024

Technologies: React.js, Node.js, Express.js, MySQL, Python Microservices

- Designed and deployed role-based academic collaboration platform connecting students, supervisors, admins, and business owners with real-time notifications and team formation capabilities
- Implemented secure authentication using Passport.js, resume uploads with Multer, and database operations with Sequelize ORM; applied efficient data structures to optimize search and matching logic
- Contributed across full Agile lifecycle including defining user stories, acceptance criteria, and definitions of done; participated in frontend/backend development, Python microservice integration, debugging, and sprint-based delivery

GAN-based Image Authenticity Detection | University of Windsor | Jan 2024 – Apr 2024

Technologies: TensorFlow, Python, Hugging Face, GAN

- Built GAN-based deep learning model in Python capable of differentiating between real and AI-generated images with 92% accuracy; served as a proof-of-concept analytics tool for image authenticity detection
- Applied advanced training strategies including data augmentation, hyperparameter tuning, and transfer learning to optimize model performance; used NumPy and Pandas for data preprocessing and analytics pipelines
